CROSTON PLUMBING & HEATING

A photograph of a modern bathroom. A white freestanding bathtub is the central focus, positioned in front of a large window that looks out onto a city skyline. To the left of the tub, there are three potted plants: a tall leafy plant in a white pot, a cactus in a white pot on a black tripod stand, and a smaller cactus in a white pot on the floor. The floor is made of light-colored tiles. The overall lighting is warm and bright, suggesting a sunny day.

**HOW TO PLAN
YOUR NEW
BATHROOM**

NEVER RUSH YOUR BATHROOM DESIGN AS YOU MAY BE REGRETTING IT FOR THE NEXT 12 YEARS

Planning your bathroom may seem a daunting task, but here at **Croston Plumbing & Heating**, we want to guide you through some easy to follow step by step guides.

Additionally, you can come and see our wide range of bathroom products at our showroom and receive some expert advice from our experienced staff.

Our showroom is open 6 days a week, with Saturday morning by appointment only.

We have a wealth of expertise and locally we are renowned to be your go-to new bathroom installation company that has the highest levels of quality.

Whether you are looking to give an existing bathroom a new lease of life or wanting to create a new bathroom from scratch, our list of top tips for planning the perfect bathroom below will help ensure you hit the ground running.

As bathrooms are normally changed every 8 -12 years, it's paramount that you take your time and don't rush. It can be far more cost-effective to ensure that you have planned your bathroom properly, than having to re-design and rectify problems after your bathroom installation.

01

WHATS YOUR BUDGET

It's important from the outset to set expectations based on your budget.

02

YOUR LAYOUT

One of the most important things you can do when renovating your bathroom is to properly plan the layout

03

GET INSPIRATION

Starting to get your creative juices flowing can be a challenge, so don't beat yourself up

04

DON'T SKIP ON STORAGE

With your new bathroom design, you have the opportunity to plan practical storage solutions

05

LET THERE BE LIGHT

Electrical safety is absolutely paramount, so ensure that you get a qualified electrician to conduct the work

06

FEASIBILITY

Your new bathroom will have its limitations due to your budget, space and lifestyle requirements.

07

GET SOME VENTILATION & HEATING

Without ventilation, damp can occur and that's a real problem you want to avoid.

08

DON'T SLIP ON FLOORING

Practicality is the main consideration when it comes to specifying a floor covering for the bathroom area

1. BUDGET

YOUR BATHROOM IS USED MORE TIMES THAN YOUR DINING OR FAMILY ROOM...

We all have our own vision of how we want our new bathroom to look.

It's important from the outset to set expectations based on your budget.

In general, the cost of replacing a new bathroom can range from around £2,800 - £6,700 for a basic to the mid-range bathroom. Luxury bathrooms can cost more than £7,000. If you are also considering underfloor heating, then this budget will increase dramatically.

An independent survey ([source-ranker.com](https://www.source-ranker.com)), stated that your bathroom is used more times than your dining room or family room. A key point when allocating a budget to your new bathroom.

Our surveyor at **Croston Plumbing & Heating** will talk you through a variety of different options and find suitable alternatives to accommodate most budgets.

2. LAYOUT

One of the most important things you can do when renovating your bathroom is to properly plan the layout.

CREATE A ROUGH DRAFT TO VISUALISE YOUR IDEAL BATHROOM LAYOUT

Once thought of as a purely practical space, the bathroom is now viewed by many homeowners as a place of personal oasis and relaxation.

One of the very first things to consider is the position of your toilet. This is usually dictated by your soil pipe. In most cases, it will be much easier to fit your toilet where the soil pipe exits the room, rather than considering a different layout.

Following this, you should decide which other products you would like to include, such as sink type, bathroom furniture, bath or a shower.

To help gain a sense of space you can plan your bathroom layout by simply getting a piece of graph paper and drawing out your bathroom size to scale.

3. INSPIRATION

Do you prefer a minimalistic feel with clean colours or are you more drawn to a more rustic Scandinavian theme?

STRUGGLING FOR IDEAS...YOU ARE NOT ALONE!

It can be a real challenge to get those creative juices flowing and there's nothing wrong with that.

You should never feel pressured or rushed, so don't decide on a layout or style until you're 100% happy

Your bathroom surveyor will have a variety of different layouts and designs ideas for you.

To create a colour theme within your bathroom, request samples of tiles, paint and flooring.

You can also search the vast number of bathroom design websites, that will provide inspiration so you can discuss with your installation company.

Family and friends can be good sounding boards and may be able to share their experiences.

Home improvement magazines and Pinterest can also be a great source of fresh ideas. The 'ideal bathroom' & 'kitchen & bathroom as examples, may add value to your lack of inspiration.

ENJOY THE VAST ARRAY OF FREE INSPIRATIONAL IDEAS AVAILABLE

4. STORAGE

One of the most important things you can do when renovating your bathroom is to plan your storage.

DON'T SCRIMP ON STORAGE SOLUTIONS AS YOU MAY REGRET IT LATER

With your new bathroom design, you have the opportunity to plan practical storage solutions.

Some people are happy to have all their soap, toothpaste, toilet rolls & bath towels on full view.

Other's prefer a more minimalistic feel, so out of sight is more to their preference.

The storage space you will need will likely depend on your lifestyle requirements. A family bathroom will need more storage space for bath toys, sponges and kids shampoos.

Manufacturers understand these types of problems, so you will have plenty of clever storage solutions to consider.

5. LIGHTING

PAY ATTENTION TO THE BATHROOM LIGHTING REQUIREMENTS FROM A PRACTICAL POINT OF VIEW

A light fitting positioned centrally within your bathroom should provide sufficient brightness for everyday bathroom activities.

Some people like dimly lit bathrooms where they can enjoy all the rejuvenating qualities afforded by a long soak in the bath by candlelight. Others prefer a much more enlightening experience. Your preference will determine both the number and type of lights you install.

Electrical safety is absolutely paramount, so ensure that you get a qualified electrician to conduct the work.

Ensure that all the electrical installations comply with current building regulations. Either your bathroom surveyor or electrician will be able to provide further advice.

BEING HONEST WITH YOURSELF CAN SOMETIMES BE A REAL CHALLENGE

If you are a homeowner, you will have already likely experienced this before. The fact to be realistic and that sometimes you have to lead with your head instead of your heart.

You may fall in love with certain features that you cannot have because they are just out of your price range or simply won't fit in your layout, you'll end up feeling disappointed – even if your finished bathroom is absolutely gorgeous.

It can be a difficult pill to swallow, but keeping it real from the outset is important. Sure, you can try and pack your new bathroom with stuff, but you will likely regret it further down the line. So, accept what's feasible with what you have got and appreciate that on some occasions certain things can just be out of reach.

6. WHAT'S FEASIBLE

Your new bathroom will have its limitations due to your budget, space, imagination & lifestyle requirements.

7. VENTILATION & HEATING

WITHOUT VENTILATION, DAMP CAN OCCUR AND THAT'S A REAL PROBLEM YOU WANT TO AVOID.

It's crucial that when designing your new bathroom, that you ensure you have adequate ventilation.

If you overlook the ventilation in your bathroom, you'll regret it later. That's because poor ventilation in a room that contains a lot of moisture is a recipe for disaster.

Not only will you likely experience a build-up of mould on your walls, but you'll also have the headache of constant condensation on your windows, mirrors and shower cubicles.

Towel radiators and underfloor heating have become very popular in modern-day bathrooms.

People opt for positioning their heated towel radiators on the wall and therefore freeing up valuable floor space.

Although there are a variety of different sizes available, they are smaller than radiators.

KEEP YOUR TOWELS WARM WITH YOUR WALL-MOUNTED TOWEL RADIATOR

There's a wide array of different materials you can use for your bathroom floor, including vinyl, natural stone, engineered wood or laminate. Your choice will all come down to your personal taste and available budget.

To avoid unnecessary accidents within your bathroom area, it's essential to select a water-resistant surface that won't become slippery when wet.

We recommend a tile with a matt, textured surface. This will ensure the floor is anti-slip and safe.

FLOOR PORCELAIN TILES

- ✓ Low maintenance
- ✓ Easy to clean
- ✓ Stain proof

8. FLOORING

Practicality is the main consideration when it comes to specifying a floor covering for the bathroom area

Do you have your heart set on underfloor heating? While it's a lovely feature to have, be aware that this could put a serious dent in your budget and requires your bathroom to undergo some major surgery.
